

Chemistry - States of matter

Properties of Materials

Key Vocabulary

change - to make different

collection - when water flows back into rivers, streams and lakes and gets carried back to sea

condensation - when water vapour cools and turns back into water

evaporation - when water is heated and turns into water vapour

freeze - when something is put at a very low temperature

gas - a state of matter that has no defined shape or volume

heat - when something is put at a hot temperature

liquid - a state of matter that flows freely but keeps the same volume

precipitation - when water falls from the clouds in the sky

property - a characteristic

solid - a state of matter that is firm and stable

temperature - how hot or cold something is
thermometer - an instrument used for measuring temperature
